APRIL 15

MAKE A HEXAFLEXAGON

Welcome to the jungle, where man-cub Mowgli lives alongside animals—some friends, some foes. Can you find them all?

Cut out the shapes. Once you've made your own hexaflexagon, keep flipping this magical mathematical shape inside out to reveal hidden pictures.

STEP 1

Cut out the small template, or cut out and join the 3 pieces to make the big one. Then, fold it down the middle along the red line

STEP 2

With 'G1' facing up, fold forward on each of these red lines in turn

STEP 3

You should end up with shape that looks like this...

STEP 4

With the 'back' facing you, fold along this line, folding side 'A' behind side 'B'

So it looks like this...

STEP 5

Fold along this line, folding side 'B' over side 'A'

So it looks like this...

STEP 6

Bring 'G1' out from behind so it sits in front, then fold and stick 'G2' on to 'G1'

Back

Front

HOW TO USE IT

Pinch any corner together...

...push the opposite corner in and back

Until you have a 3-point star...

...and you can see a new image inside

Then 'peel' open the middle of the star...

...to reveal the new image
